The State University of New York (SUNY) Downstate Medical Center is the only academic medical center for health education, research, and patient care serving approximately 2.5 million residents of the borough of Brooklyn. Brooklyn is the most populous of the five boroughs of New York City. The borough is estimated to be the seventh largest county in the United States, and if it were a city, it is estimated it would rank as the fourth largest city.

Located on an urban campus in central Brooklyn, SUNY Downstate Medical Center includes a College of Medicine, College of Health Related Professions, College of Nursing, School of Graduate Studies, School of Public Health and the University Hospital of Brooklyn (UHB). The UHB includes a free-standing Urgent Care and Ambulatory Surgery Center at Bay Ridge and ten ambulatory satellite sites. Over 1,800 students pursue certificate programs, Bachelor of Science, Master of Science, Master of Public Health, Doctor of Public Health, Doctor of Physical Therapy, Ph.D. and M.D. degrees.

The Center is heir to a tradition that began more than a century ago, with the founding in 1860 of the Long Island College Hospital — this country's first teaching hospital and the prototype for all subsequent medical centers. SUNY Downstate Medical Center has a three-fold mandate: education to train physicians, nurses, research scientists and allied health professionals; research in the medical sciences; and the provision of clinical care to the population of New York State.

This complex organization serves the needs of a larger and more diverse urban constituency than any other such center in the country. It upholds a special responsibility to solve difficult problems found primarily in urban areas, and to serve those who are underserved.

For more information about the College of Medicine, see our website at http://sls.downstate.edu/admissions/com. Topics include: institutional history, facilities, curriculum, application policies and procedures, research opportunities, residency placement information, student life, residential life, and financial aid.

The Integrated Pathways curriculum emphasizes learning across disciplines with an emphasis on understanding core principles.

It is a competency-based curriculum designed to prepare our graduates to enter any field of medicine and will include attaining the knowledge, attitudes, and skills contained within the six Domains of Competence. These Domains of Competence are modeled after the six competencies, which are followed by residency programs. Our curriculum will provide a form of continuity for our graduates into residency, and better prepare them for the next level in their careers.

GOALS

THE SIX COMPETENCIES

- Patient Care
- Medical Knowledge
- Interpersonal and Communication Skills
- Medical Professionalism
- Practice-based Learning and Improvement
- Systems-based Practice

Upon graduation from SUNY Downstate, the student will have demonstrated the following:

1. Domain of Patient Care

Graduates must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. Domain of Medical Knowledge

Graduates must demonstrate knowledge about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. Domain of Practice-Based Learning and Improvement

Graduates must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices.

4. Domain of Interpersonal and Communication Skills

Graduates must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with patients, their patients families, and professional associates.

5. Domain of Professionalism

Graduates must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Graduates must also assess personal values and priorities in order to maintain an appropriate balance of personal and professional commitments.
6. Domain of Systems-Based Practice

Graduates must demonstrate an awareness of the relationship between themselves and the patient, community, and healthcare system as well as recognize the impact on optimizing patient care.

Both clinical medicine and foundational basic science will be taught over the entire four years in a three-phased curriculum:

- Foundations of Medicine: 18 months
- Core Clinical Medicine (Clerkships): 12 months
- Advanced Clinical Medicine: 14 months

**FOUNDATIONS OF MEDICINE**

There are six major interdisciplinary units in the Foundations of Medicine that promote learning in all six competencies and integrate learning normal and abnormal structure and function. Students will begin practicing clinical skills from the beginning of the curriculum allowing them to develop their mastery of basic techniques over an 18-month period prior to entry into Core Clerkships.

**Foundations of Medicine: Year 1**

The Foundations of Medicine uses a multidisciplinary, systems-based approach to teach the normal structure and function of the body while introducing students to basic clinical skills and abnormal structure and function. The disciplines (i.e., Gross Anatomy, Biochemistry, etc.) are integrated and organized into Units based either on foundational concepts (Units 1–3) or on organ systems (Units 4–6).

Each Unit incorporates multiple teaching modalities including lectures, case-based learning, team-based learning, Problem Oriented Patient Sessions (POPS), laboratories, and patient skill laboratories. Students are expected to take responsibility for ensuring that they obtain a conceptual understanding of subject matter in addition to knowledge of factual information. Weekly formative assessments, similar to those used at the end of unit summative assessments, will help students track their progress.

**Unit 1. Systems Overview & Musculoskeletal System**

The first Unit begins with an overview of major organ systems that allows students to begin learning and practicing clinical skills such as listening to heart and lung sounds, palpation of major organs and measuring pulse and respiration rates. Students will also begin to learn the structure of the human body by examining prosections and then performing dissections intended to demonstrate the musculoskeletal systems and consequences of injury to these systems. This learning will be supplemented by the use of medical imaging such as radiographs and ultrasound.

**Unit 2. Molecules to Cells**

In Unit 2 students will develop an understanding of the biochemical, molecular and cellular biological and genetic basis for disease. Progressing from a visual understanding of the musculoskeletal system they explore cell and tissue structure and function based on diseases with both genetic and environmental origins. At the same time they continue to practice and develop clinical skills introducing elements related to the diseases under study and begin to work with physician preceptors in ambulatory offices. Among topics to be covered will be the expression of genetic information, differences in structure and function of differentiated cells, protein and enzyme structure and function, energy generation by metabolism of basic foodstuffs and the role of nutrition in health and disease, early embryonic development, the cellular basis of neoplasia and the life cycle and function of red blood cells.

**Unit 3. Infection & Host Immunity**

Unit 3 introduces students to infectious diseases, the biology of the causative agents and the defense systems that protect against them both as defenders of the human body and as causes of disease when regulatory systems fail. Students will first extend their knowledge of blood cells by studying white blood cells and their role in defense against pathogens. They will study the role of lymphocytes and antigen-presenting cells in humoral and cell-mediated immune responses along with understanding the body-wide distribution of lymphoid tissues and organs. Principles of neoplasia learned in Unit 2 will be extended by studying cancers of the lymphoid system, leukemias and lymphomas, and their treatment. To understand the anatomical distribution of defense mechanisms and the sensitivity of respiratory passages to infectious agents students will explore the anatomy of the head and neck and the susceptibility of these structures to infections by respiratory viruses. Diseases caused by disorders of the immune system such as allergies, inflammation, HIV infection, and auto-immunity will be examined in relation to specific diseases. The role the immune system plays in diseases of skin, muscles, bones and joints will also be a focus of this Unit. Concepts developed during this Unit will also be applied to further development of clinical skills.

**Unit 4. Gastrointestinal and Reproductive Systems**

Unit 4 is the first of three units focused on defined organ systems. Fundamental knowledge acquired in Units 1 to 3 will be applied to disorders and diseases that affect the gastrointestinal and reproductive
systems. Initially students will explore the structure of the gastrointestinal tract and the physiology and pathophysiology underlying its normal function and disorders that arise. Imaging techniques will help students relate the anatomy of the organs to their microscopic structure and the mechanisms underlying functionality. Inter-relationships between organs (e.g., bowel and liver) will be explored to understand digestion and uptake of nutrients and the role of nutrition in normal health or disease. Later, students will examine the structure and function of male and female reproductive systems and the control mechanisms that regulate their functioning. In an integrated fashion students will become familiar with diseases and disorders that affect these systems including breast and uterine cancer and dysfunctions of the endocrine systems that regulate such organs. Students continue to practice taking histories, doing physical exams and applying the information they gather to making diagnoses.

**Foundations of Medicine: Year 2**

**Unit 5. Cardiovascular, Renal, Respiratory & Endocrine Systems**

After the summer, this Unit begins the second year of Foundations. Students will learn about the structure and function of the cardiovascular system and the effect of various diseases affecting it such as valvular disease and myocardial infarction. At the same time the effect of disorders of the endocrine system will be explored in relation to their contribution to cardiovascular and other diseases such as diabetes and atherosclerosis. Later, students will explore the functioning of the lungs and kidneys and their roles in maintaining homeostasis together with the consequences of diseases affecting these organs and their treatment. Since these organs act together to regulate normal conditions within the body, students will learn how their functions are integrated and what happens when this normal state is disrupted. Throughout the Unit students will apply their clinical skills and incorporate new information related to examination of the patient including EKG data interpretation and imaging techniques. In this unit, students begin to interview and examine patients in the hospital setting to refine their clinical skills and to practice the fundamentals of clinical reasoning.

**Unit 6. Brain, Mind & Behavior**

Unit 6 is the last component of the Foundations of Medicine and is focused on understanding the central nervous system and its disorders. Initially students will examine the gross and microscopic structures of the various regions of the human brain using dissections, imaging and virtual microscopy. These studies will be combined with recognizing the effects of tumors and infections on the brain. Students will then learn to apply concepts of central neural pathways to the neurological aspect of the physical examination together with the effect of disorders such as epilepsy and stroke and demyelinating diseases. Finally students will explore how the brain determines aspects of human behavior and consciousness and the consequences of defects that lead to abnormal function and behavior (dementia, delirium, psychosis and anxiety or depression). Students continue to practice their clinical skills in order to prepare them for their Core Clinical, or clerkship year.

Following the assessment week for Unit 6, students will have an interval to study for and pass the Step 1, United States Medical Licensing Exam (USMLE), one of the three exams required for licensure and also required for promotion to our next level of Core Clinical Medicine.

**Core Clinical Medicine (Clerkships) — 12 months**

Paired clerkships during the Core Clinical Medicine year to enhance interdisciplinary teaching across clerkships and support integration of relevant basic science knowledge.

**Advanced Clinical Medicine — 14 months**

Advanced Clinical Medicine year requires students to take 4 weeks of integrated biomedical science selective, a Diagnostic Imaging rotation, a Critical Care rotation, an expanded Emergency Medicine rotation, four weeks of Geriatrics and Palliative Care, and a Sub-Internship. Students will have 4 months of elective time and 4 months for vacation, Step 2 studying, and residency interviews.

**Third and Fourth Year Curriculum**

The requirements for graduation are as follows:

<table>
<thead>
<tr>
<th>Core (third year) Clerkships</th>
<th>Number of Weeks in Rotation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transition to Clerkship</td>
<td>1</td>
</tr>
<tr>
<td>Internal Medicine</td>
<td>8</td>
</tr>
<tr>
<td>Surgery</td>
<td>8</td>
</tr>
<tr>
<td>Anesthesiology</td>
<td>2</td>
</tr>
<tr>
<td>Pediatrics</td>
<td>6</td>
</tr>
<tr>
<td>Women’s Health</td>
<td>6</td>
</tr>
<tr>
<td>Psychiatry</td>
<td>6</td>
</tr>
<tr>
<td>Neurology</td>
<td>4</td>
</tr>
<tr>
<td>Primary Care/Family Medicine*</td>
<td>4</td>
</tr>
</tbody>
</table>

The third year includes 4 weeks of elective time that can also be used as flexible time or vacation as long as the total clinical time requirements are met by graduation. In the spring of the third year students are required to successfully pass a mandatory standardized patient experience, which is designed to be preparation for the Clinical Skills, United States Medical Licensing Exam (Step 2CS, USMLE).

* The Primary Care/Family Medicine clerkship extends one half-day per week for 24 weeks, through the Medicine and Perioperative Care clerkships, to allow students a longitudinal ambulatory care experience.
Students will continually receive feedback on their progress in the six competencies so that they and faculty members can ensure that they become the finest physicians possible.

The new curriculum emphasizes methods that will prepare students for the type of learning they will need to engage in as physicians. Teaching methods have been selected which promote student centered, active learning and promote problem solving and clinical reasoning, rather than memorization.

The curriculum supports active learning through a variety of learning methods described below that promote learning in groups and are linked to frequent feedback via formative assessments allowing both students and faculty members to monitor progress. These methods are chosen to promote learning at an application level with long-term retention.

Faculty-directed, student-centered learning supports the development of students as life-long learners by using a range of active learning methods to promote higher order cognitive understanding and retention. Students will continually receive feedback on their progress in the six competencies so that they and faculty members can ensure that they become the finest physicians possible.

**Interactive Lecture**

Lectures are used to ensure conceptual understanding of difficult material, emphasize key concepts and principles and provide an organizational structure on which to build new learning. Many lectures will be interactive—that is, they will involve students in problem solving, demonstrations, or discussion.

**Laboratory-based exercises**

These exercises require students to learn directly from biological materials, such as dissecting cadavers or growing microbial cultures. In addition to the acquisition of medical knowledge, students in laboratory-based exercises learn to work in teams and can practice communication skills by presenting results of their work to other students and to faculty.

**Virtual microscopy exercises**

These exercises require students to learn about the normal structure of human tissues and the pathologies affecting them using state of the art technology both in groups and by students on their own. Facilitated Small Group Case-Centered Learning

Students work in groups of 9 or 10 with a facilitator on a patient case. Cases might begin with students gathering case information from a standardized patient to practice patient interviewing skills. Students will derive learning issues from the case by group discussion. After researching the learning issues, groups will meet again to present their findings. This mode lends itself to integrating learning of medical knowledge with clinical skills and mirrors the “discovery learning” skills needed by physicians for a lifetime of learning.

**Facilitated Small Group Clinical Skills Training**

Students work in small groups with a faculty member to learn basic clinical skills. They will develop their command of these skills by practicing on each other, on patients in clinics or doctors’ offices or by working with mechanical simulators or standardized patient actors or teaching associates.

**Patient Care Centered**

Students will work with patients during all four years but learning from patients is most intense in the Core and Advanced Clinical Medicine years. Students will learn medicine in the office and at the bedside during clerkships, other clinical rotations and electives. Standardized patients will be used during the Core Clinical Year to help students refine their clinical skills and to prepare them for the Step 2 Clinical Skills exam.

Both clinical medicine and foundational basic science will be taught over the entire four years in the three-phased curriculum.

**ASSESSMENT (GRADING)**

Foundations of Medicine is a Pass/Fail grading system. The Core Clinical Medicine and the Advanced Clinical Medicine is a five (5) tier grading system (Honors, High Pass, Pass, Conditional, Fail).

Formative assessments will be designed to prepare students for summative assessments at the end of units or clerkships. Assessment, like learning, will be integrated: a standardized patient case might include assessments of several competencies. The use of assessment methods other than multiple-choice tests will include essays, objective structured clinical examinations (OSCEs), and other interactive methods.

All six competencies will be represented in the learning objectives and assessment outcomes for each unit and clerkship. Students will not be
RESEARCH OPPORTUNITIES

We are very proud that research from SUNY Downstate has been acknowledged as breakthrough work by other scientists. SUNY Downstate Medical Center emphasizes the importance of research to physicians and encourages its medical students to participate in research as part of their medical training. Our medical students can learn how to use available information to formulate hypotheses that can be tested and extend knowledge in their research area. They learn how to be effective members of a research team and gain training in collecting analyzing, graphing, interpreting and presenting their results to the team at regular meetings with mentors and collaborators on the team. Research opportunities are available throughout all four years of medical school. There are a large number of research choices with training provided by mentors in many different Downstate clinical departments, laboratories and/or at other collaborating NYC area laboratories. Mentors provide research training in basic science, clinical and in translational medicine disciplines. A list of Downstate and other NYC area faculty research mentors and their areas of interest is provided on the institutional website: http://www.downstate.edu/research.html

Many students begin doing research as early as the summer of their first year in medical school. The Alumni Association Fund provides support to summer research students through the submission of small grant applications submitted by students with the help of their identified mentors. The grant applications are scored and students receive awards for the best applications through an assigned committee. Full descriptions of these opportunities are available on our website (http://sls.downstate.edu/admissions/com/research/summer_fellowship.html).

Students can and do decide to continue this work beyond the summer period, thus gaining more training and involvement with their project and potential for inclusion in abstracts and papers emanating from the work. Those students who wish to pursue research on a full time basis for a year or more at NIH or many other available granting institutions/foundations are also encouraged and supported to do so. At Downstate, each year the Alumni Association also sponsors one student for a full year of research between the third and fourth years of school. Many Downstate students participate in research during clinical training years for elective credit. Overall, approximately 60 Downstate students each year participate in clinical, basic science and translational research at Downstate. Approximately 20 students each year participate in research for credit at other institutions. In addition, the Clinical Neurosciences Pathway provides students interested in the clinical neurosciences with access to a number of stimulating clinical and research activities. Pathway students are eligible for special summer research and year-out opportunities for clinical and basic neuroscience study.

Medical students who have participated significantly in research are acknowledged at graduation with specific departmental awards or others including “Distinction in Research” or “Commendation in Investigative Scholarship”. Approximately 15 students per year receive this recognition.

The MD-PhD program at Downstate graduates approximately 3 dual degree medical students every year. The College of Medicine in conjunction with the School of Graduate Studies sponsors an annual Research Day where students are given the opportunity to present their research to the Downstate community. Students compete in the poster competition at Research Day and have the opportunity to be acknowledged for the quality of their poster presentation and can receive awards that can include travel support to scientific meetings where the students present their research to other scientists.

MD/PHD PROGRAM

The College of Medicine and the School of Graduate Studies jointly sponsor a program leading to an excellent, combined M.D./Ph.D. degree. This program combines a medical education with an intensive research experience and is designed for students who are interested in pursuing a career in academic medicine. Students are supported with a stipend and a tuition scholarship throughout the duration of the program. This program, which graduated its first M.D./Ph.D. in 1967, has been highly successful.

In evaluating applicants for the program, considerable emphasis is placed on prior research experience. Applicants to this program must apply for admission separately to the College of Medicine and to the School of Graduate Studies. They are considered for the combined M.D./Ph.D. as part of the admissions process in both schools. When filing your AMCAS application, you should indicate “Combined Medical Degree/PhD." The deadline to have a completed application on file with both colleges is December 1. Early application is recommended. In addition to your AMCAS application and the SUNY Downstate Supplemental Application, you will be required to complete an MD/PhD Supplemental Application which is available on the School of Graduate Studies website. The School of Graduate Studies will also consider applications for the MD/PhD program from First and Second year students.

Note: if you applied Regular MD only, and now wish to apply MD/PhD, log into your AMCAS application and submit a Post Submission Change—change Program type via AMCAS and select Combined Medical Degree-PhD. There is no charge for changing your program type as long as you are not adding an additional school.

MD/MPH PROGRAM

Medical students at SUNY Downstate can earn a Master of Public Health degree while at the same time they earn their MD degree. Some students choose to complete the MPH by taking summer courses starting before the first year of medical school. Others take a year off between the third and fourth year of medical school to complete the MPH; either way, the MPH gives a physician the power to do more.

Our program focuses on the health of immigrant and urban populations. The student may choose to complete the MPH in one of five core areas: Biostatistics, Community Health Sciences, Environmental and
Occupational Health Sciences, Epidemiology, or Health Policy and Management

To learn more about the MD/MPH program please click on the following hyperlink http://sls.downstate.edu/admissions/com/sph_program.html

It is not necessary to complete a second application. We will use your AMAS application for the MD/MPH program. The application deadline for MD/MPH applicants is May 1 for the Summer-entering class.

When filing your AMCAS application, you should indicate “Combined Medical Degree/Graduate.”

RESIDENCY PLACEMENT

SUNY Downstate Medical Center has an excellent reputation for clinical preparation and training for residency. In addition, another variable used by many residency programs to determine who will be granted a residency program interview is Step 1 of the USMLE (licensing exam). SUNY Downstate Medical Center’s students have consistently passed Step 1 on the first attempt at a higher than the national average, and with scores above the national average.

Among the institutions where the Class of 2017 went for their residency training are: New York Presbyterian (Columbia), New York Presbyterian (Cornell) New York University, Einstein and Einstein Affiliates, Mount Sinai, Northwell Health Systems, Beth Israel Deaconess (Harvard affiliate), Baylor College of Medicine, Cedars-Sinai Medical Center (CA), Children’s Hospital of Philadelphia, Duke, Johns Hopkins, Rochester, UCLA, UC San Francisco, Yale, and many others.

Residency placement lists for the past 22 years (including 2017) are posted on the web site at:

sls.downstate.edu/student_affairs/residency/placement.html

Residential Life

SUNY Downstate Medical Center maintains two residential facilities for students in the Colleges of Medicine, Nursing, Health Related Professions (CHRP), School of Public Health, and the School of Graduate Studies. There are two Residence Halls located on the Downstate Medical Center Campus. Each building can accommodate approximately 200 residents for a total capacity of 400 residents, in traditional residence hall rooms and apartment style units. For additional information on residence hall living, please visit our website at

http://sls.downstate.edu/residential_life/

Students may also elect to live off campus. If you are unfamiliar with the borough of Brooklyn and its neighborhoods, go to Visiting New York Neighborhoods at nymag.com/visitorsguide/neighborhoods/

The Office of Residential Life also has a listing of off-campus apartments, which have been submitted for posting by private landlords.

FINANCIAL AID

SUNY Downstate Medical Center is committed to helping students meet their educational expenses through various types of financial assistance.

Grants are offered on the basis of need, determined in accordance with Federal regulations. Some scholarships based on academic achievement are available.

The major portion of our assistance is derived from federal and state funding. We offer grants, scholarships, loans and federal College Work Study. Loans are the most common form of assistance. The amount of assistance you may receive is determined by the cost of attendance. Although, the primary responsibility for financing graduate education rests with you, we are able to provide assistance to all students.

To apply for aid, you must submit a Free Application for Federal Student Aid (FAFSA) as soon as possible. As a Graduate Health Professions student, you must submit parental information on the FAFSA in order to be considered for the economically disadvantaged grants we are able to offer. We highly recommend that you visit our website for further information regarding financial aid. If you are accepted to the College of Medicine, instructions for applying and the institutional application for aid will be e-mailed to you, but they are also available on the website.

COSTS OF EDUCATION

The 2017–2018 tuition for the College of Medicine is on the Bursar's web site located at: http://sls.downstate.edu/bursar/ tuition_fees.html

Estimated budgets for each of the four years are posted on the financial aid website: http://sls.downstate.edu/financial_aid/costs/index.html

Tuition and fees for the 2017-2018 application cycle are subject to change by the State University system Board of Trustees.

Living expenses will vary depending upon the type of accommodations and lifestyle selected by you; however, aid will only be based on your cost of attendance as determined by the Office of Financial Aid, not your lifestyle choices. You should always try to economize to the greatest extent possible so as to prevent unnecessary debt.

According to the Association of American Medical Colleges, private medical schools reported an average indebtedness level of their 2016 graduating students of $203,201, while public medical schools reported an average indebtedness of $180,610 for the same period. For the class of 2017, the average medical school indebtedness of our graduates was $168,669.00.

ADMISSION INFORMATION

ADMISSIONS POLICY

The Committee on Admissions considers the total qualifications of each applicant without regard to sex, race, color, creed, national origin, religion, age, sexual orientation, marital status or disability. Decisions regarding admission are based on multiple factors including prior academic performance; completion of the courses required for admission; the potential for academic success including performance on standardized tests such as the Medical College Admission Test (MCAT); communication skills, character, personal skills, health related experiences, and motivation for a career in medicine. New York State
residents are given admissions preference, although well-qualified out of state applicants are also accepted. We welcome and encourage applications from women and members of groups underrepresented in medicine.

**TECHNICAL STANDARDS**

The College of Medicine strives to select students who possess the intelligence, integrity and personal and emotional characteristics that are considered necessary to become an effective health professional.

Students admitted to the College of Medicine should have the intellectual and physical abilities to acquire the knowledge, behaviors and skills taught in the program of study. The curriculum is designed to provide the general education necessary for the students selected for medicine. Students will learn fundamental principles needed to develop critical judgment, and learn to apply principles and skills wisely in solving scientific and health related problems. Curricular goals and/or minimal graduation requirements have been developed to fulfill these objectives and to prepare graduates to pursue post doctoral education, if desired.

In addition to satisfactory academic performance in all coursework, students are expected to fulfill the non-academic essential functions of the curriculum in a reasonably independent manner. These functions are specified by the physical, cognitive, and behavioral standards (referred to collectively as technical standards) necessary for the completion of the program.

SUNY Downstate College of Medicine will consider for admission and advancement any individual able to perform pursuant to the standards, which are used as guidelines. Reasonable accommodations will be provided to qualified individuals with a disability in accordance with applicable laws and policies, while maintaining the integrity of program standards. Requests for accommodations will be determined on a case-by-case basis. A description of the technical standards for the College of Medicine is on the following webpage

http://sls.downstate.edu/student_affairs/disabled_students/tech_standards.html

**STUDENTS WITH DISABILITIES**

Students with disabilities who wish to request accommodations for their academic program are required to complete the appropriate form prior to matriculation. The Office of Student Affairs coordinates arrangements for students with disabilities.

Students who wish to request accommodation(s) after they have matriculated into the college are required to complete the appropriate form available from the Office of Student Affairs. Please note that accommodations may require time to process or to put in place.

**ADMISSIONS REQUIREMENTS**

You must have completed at least 90 semester credits of study from a college or university accredited by the Council for Higher Education Accreditation (CHEA) regional accreditation association (e.g., Middle States Association of Colleges and Schools). Admissions preference is given to applicants who have earned, or will have earned, a bachelor degree in a regionally accredited college or university. Admissions preference is also given to applicants who have completed prerequisite courses in four-year colleges/universities in the United States (not in study abroad programs); and to applicants who have completed science prerequisites in a traditional classroom setting (not through distance learning).

If you were educated abroad, a minimum of two full time semesters (one academic year) of college study at a CHEA regionally accredited college/university in the United States prior to application is required. In addition, you must demonstrate English proficiency, both verbally and in writing, if your prior medium of instruction was in another language. If a substantial amount of your education has been completed abroad, or if you have completed science prerequisites abroad, you are required to submit a course by course educational credentials evaluation from a National Association of Credential Evaluation Services (NACES) agency, such as World Educational Services to enable the Committee on Admissions to assess prior academic performance.

**PREREQUISITE COURSES REQUIRED FOR ENTRANCE INTO SUNY DOWNSTATE MEDICAL CENTER INCLUDE:**

<table>
<thead>
<tr>
<th>Courses</th>
<th>Semester credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>English†</td>
<td>6</td>
</tr>
<tr>
<td>General Biology or Zoology including labs</td>
<td>8</td>
</tr>
<tr>
<td>General Physics including labs</td>
<td>8</td>
</tr>
<tr>
<td>General or Inorganic Chemistry including labs**</td>
<td>8</td>
</tr>
<tr>
<td>Organic Chemistry including labs</td>
<td>8</td>
</tr>
</tbody>
</table>

Note: If your college follows the quarter system, usually three courses equate to two courses under the semester system. Check very carefully to be sure that you have completed the required number of courses plus labs. If your college has separate lecture and lab courses, you might need to take more than the indicated number of credit hours above, to fulfill course sequences.

The Committee on Admissions looks favorably on a program of study that includes at least one year of college mathematics and advanced science subjects. A course in biochemistry is strongly recommended. Other desirable courses include anatomy, physiology, histology, cell biology,

---

† In general, the Committee does not accept English courses taken abroad to fulfill the English admission requirement. Courses which have the English department prefix are accepted to fulfill the English requirement. If you have an inter-disciplinary course or if your college or university accepts other courses to fulfill writing or English requirements, please email a scanned letter from your college stating this information medadmissions@downstate.edu. Remember to include your name and AMCAS ID on any communication with us.

** If your college/university offers an intensive one-semester general or inorganic chemistry course with lab for qualified students, and considers this equivalent to the traditional two-semester course, you may use this to satisfy our requirement for general chemistry. However, you should also take a higher level chemistry course, preferably Biochemistry. In addition, you should indicate on the Supplemental Application that the one-semester course is an advanced general or inorganic chemistry course, and email to medadmissions@downstate.edu, a copy of the catalog description or a letter from the Department of Chemistry verifying this. Remember to include your name and AMCAS ID on any communication with us.
LETTERS OF RECOMMENDATION

All letters (packet or individual) must be submitted on letterhead, and must be signed by the letter writer. Letters not meeting these requirements will not be considered. All letters must be submitted electronically—through the AMCAS letter service (including Virtual Evals or Interfolio). The AMCAS application letter types are: Committee letter, Letter packet or Individual Letter. We do not accept letters of recommendation sent by mail, email, or fax.

If you are submitting an AMCAS Committee Letter or a Letter Packet, we accept all the letters included in the packet. Please make sure that at least one of the letters is from a science professor who has taught you in a biology, chemistry or physics course.

Guidelines for Letters of Recommendation which must be submitted or included in your packet

If you are currently enrolled in college, a letter of recommendation from the premedical advisor or committee at your undergraduate college is required. If your university/college does not have a premedical committee or advisor, you must send two letters from college professors who have taught you. At least one of the letters must be from a professor in a science department. One of the letters must be from a professor in your major field of study. Both letters must be from faculty members who have had you in their classes and who are personally acquainted with you.

If you are enrolled in a graduate program, your faculty advisor/major professor must submit a letter of recommendation. This should be in addition to the letters specified above.

If you have graduated from college and are currently employed or are a non-traditional applicant, you may submit two individual letters of recommendation if you are unable to submit a premedical advisor or a committee letter. One letter should be from a science faculty member who has taught you in one of the science courses required for admission, and the second letter may be from your supervisor at your place of employment. Both letters must be from faculty members who have taught you.

If you have not taken any college course work recently (within the last six years) but are currently employed, you may submit two individual letters of recommendation. One should be from your supervisor at your place of employment and the second may be from a physician or health professional with whom you have worked or a faculty member who has taught you and knows you well.

Please do not submit more than the specified number of recommendation letters, as this will delay the processing of your application. All letters must be submitted through AMCAS Letters. If you are submitting a packet of letters (e.g., Committee Letter or Letter Packet), we accept all the letters included in the packet.

SUNY DOWNSTATE SUPPLEMENTAL APPLICATION (SECONDARY)

All applicants must complete a SUNY Downstate Supplemental Application in order to have their application considered for admission.
Once we receive your verified AMCAS application, you will receive an email with a link to the Supplemental Application (secondary).

**SUNY Downstate Application Processing fee**

All applicants must pay a non-refundable $80 Supplemental Application processing fee or submit an approved AMCAS fee waiver. The processing fee (only credit cards are acceptable for payment) or AMCAS fee waiver are submitted with the SUNY Downstate Supplemental Application (secondary).

**Note:** Once we receive your completed Supplemental Application (secondary) and processing fee (or AMCAS fee waiver), you will receive an email from us acknowledging that both items have been received.

**APPLICATION DEADLINES**

The deadline for submitting an AMCAS application is December 1, 2017. The latest date for MD/PhD applicants to have a complete application on file with the School of Graduate Studies and the College of Medicine is also December 1, 2017. The deadline for having a complete application on file in the Office of Admissions for regular admissions is 12 noon on January 3, 2018. Incomplete applications will not be reviewed after this date. Please note that applicants must make certain that the application is complete. We will make every effort to keep you informed about the completion of your application via the admissions checklist or by email (make certain we have a current email address for you at all times and adjust your spam filter to receive our emails). A complete application consists of the following:

1. American Medical College Application Service (AMCAS) Application
2. SUNY Downstate Medical Center Supplemental Application also known as the “secondary” application. Once we receive your verified AMCAS application, you will be sent an email with a link to the Supplemental Application (secondary).
3. A nonrefundable Supplemental Application Processing Fee of $80 or an AMCAS fee waiver. The processing fee or the AMCAS fee waiver is submitted when you submit the Supplemental Application.
4. Medical College Admission Test (MCAT) scores as required
5. Letter of recommendation from premedical advisor or committee, or two individual faculty letters as required (we only accept letters sent via the AMCAS letter service, Virtual Evals, or Interfolio). Read the requirements for letters of recommendation very carefully as your letter might not be accepted if it does not meet our guidelines.

It is the applicant’s responsibility to ensure that a complete application is on file by the posted application deadline.

If you no longer wish to have an active application with us, you should withdraw your application in order to avoid further processing or emails, and to benefit other applicants. Please notify the Office of Student Admissions immediately by sending an email to medadmissions@downstate.edu. Remember to include your name and AAMC ID on all communications.

**PERSONAL INTERVIEW**

Interviews are scheduled beginning the first day after Labor Day and continue into the first half of the spring semester. We schedule interviews Mondays–Thursdays. If you are invited for an interview, and wish to stay overnight in the residence hall, this is an option. Interview invitations are sent by email.

A tour, conducted by currently enrolled medical students and a lunch with students is part of the interview day. We are unable to accommodate requests to attend classes on the day of the interview. However, accepted applicants may return for a second visit to the campus through the “Shadow-a-Student Program.” This permits you to attend classes with a student, and to have an extended tour of the residence halls, educational, and student life facilities. The Shadow-a-Student Program is available January–May.

Following your interview, it may take as long as 4–6 weeks before you will be notified of your status post-interview. You will be notified of your admissions status by email.

**INITIAL REVIEW**

The Admissions Committee will make an initial review of your application. Applications are not reviewed in the order that they are completed, so there may be a considerable delay between when your application is complete and when you are notified of your admissions status. Notification is sent by email to the email address listed on your AMCAS application. Make certain that you adjust your spam blocker to receive email from medadmissions@downstate.edu.

**REQUESTS FOR ADDITIONAL INFORMATION**

The Admissions Committee may request additional information from you to assist in the evaluation of your credentials. It is your responsibility to submit the requested information. The preferred method to submit any requested information is by email sent to medadmissions@downstate.edu. After the additional information is received, the Admissions Committee will re-review your application.

If you are asked to submit an additional letter of recommendation from a faculty member, the letter should be submitted by AMCAS letters and you or the faculty member should notify us by email at medadmissions@downstate.edu when it has been submitted to AMCAS letters.

Make certain you include your name and AAMC ID on any items that are submitted. If you have been asked to submit a fall grade report, it is not necessary to send an official transcript but make certain that the fall grade report includes course number, department abbreviation or name, the title of the course (not just a course number), the number of credit hours, and grade received. If your grade report does not provide this information, include a statement from you, which explains the abbreviations on your grade report.
DEFERRALS

Accepted applicants may request a deferral for up to one year in order to participate in educational activities or social service projects. Requests must be made in writing by **May 1, 2018** and submitted by mail or email (medadmissions@downstate.edu) for review by the Admissions Committee. No extensions beyond one year are permitted. All deferred applicants are required to file an AMCAS Early Decision/Delayed Matriculation application for the following year.

Once you are accepted for admission, you might be required to submit a New York State Residency for Tuition application, and submit supporting documentation.

CERTIPHI SCREENING CRIMINAL BACKGROUND CHECK

All acceptance letters are conditional pending a satisfactory Certiphi Screening background report.

REAPPLICANTS

You must submit a new AMCAS application, a new Supplemental Application, application fee, and new copies of the premedical letters of recommendation (unless you submit a written request by email to the Admissions Office to use the same letters that you submitted the previous year. If you applied more than one year ago, you will need to submit new letters of recommendation).

Re-applicants must adhere to the same policies, procedures and deadlines as first time applicants.

EARLY DECISION PROGRAM

If you are particularly interested in attending SUNY Downstate, you may apply as an Early Decision applicant and receive your admissions decision by October 1 of the application year. Early Decision applicants apply only to SUNY Downstate by August 1 of the application year. If the applicant is not accepted as of October 1, he/she/they may then also apply to other medical schools as desired. All requirements for Early Decision are the same as regular admissions, but the deadlines differ.

WITHDRAWAL OF APPLICATION

If you decide to withdraw your application from consideration, you must notify the Office of Admissions immediately in writing, or by email at medadmissions@downstate.edu.
HOW TO CONTACT US

Email
The preferred method of communication is by email. Any requested documents may be sent to us via email:
medadmissions@downstate.edu

Fax
(718) 270-4775

Mailing Address
SUNY Downstate Medical Center
College of Medicine
Office of Student Admissions
